

# Package Management future

As of 2024-10, we use "Gitlab PPA": <https://gitlab.com/Orange-OpenSource/gitlab-buildpkg-tools>

As we look to the future, what should we do?

## 1.1. Options

### 1.1.1. Continue with Gitlab PPA

Accept limitations of <https://gitlab.com/Orange-OpenSource/gitlab-buildpkg-tools> and try to improve over time

- Limited support of various OSs (ex.: FreeBSD)
- Nice /easy / free hosting by GitLab.com
- Software is maintained (Very little work for us). We reported issues and they were resolved. Ex.: <https://gitlab.com/Orange-OpenSource/gitlab-buildpkg-tools/-/issues/27> and <https://gitlab.com/Orange-OpenSource/gitlab-buildpkg-tools/-/issues/29>
- Ties us to GitLab but we can install our own instance
- We should add issues upstream with our suggestions and concerns

### 1.1.2. Custom script

- More flexibility but more work

### 1.1.3. From source

Like Tiki Manager install Tiki from Git

### 1.1.4. Other Open Source tools

Koji, etc.

## 1.2. Target platforms

### 1.2.1. Mainstream distros

Debian, Ubuntu, Alma, etc.

### 1.2.2. Docker

### 1.2.3. Snap, Red Hat Flatpaks

### 1.2.4. Windows

### 1.2.5. FreeBSD
