

Virtualmin

Started in 2003, **Virtualmin** is a powerful and flexible web hosting control panel for Linux and BSD systems. It enhances Webmin (started in 1997), which is a web-based interface for system administration for Unix. Using any modern web browser, you can setup user accounts, email accounts, Apache, DNS, file sharing and much more. Virtualmin is a [key component of WikiSuite](#).

The WikiSuite install script uses Virtualmin as explained here: <https://gitlab.com/wikisuite/wikisuite-packages>

The screenshot displays the Virtualmin Virtual Servers management interface. The left sidebar contains a navigation menu with options such as 'Create Virtual Server', 'Edit Virtual Server', 'Edit Users', 'Install Scripts', 'Edit Web Pages', 'Administration Options', 'Server Configuration', 'Logs and Reports', 'Disable and Delete', 'Services', 'System Settings', 'Email Messages', 'System Customization', 'Addresses and Networking', 'Limits and Validation', 'Add Servers', 'Backup and Restore', 'List Virtual Servers', and 'System Statistics'. The main content area shows a table of virtual servers with columns for 'Domain name', 'Username', 'Description', 'Users', and 'Aliases'. The table lists various servers, including 'virtualmin.tualmin.com', 'demo.virtualmin.com', 'demo.webmin.com', 'webmin-dem...tualmin.com', 'usermin-de...tualmin.com', 'virtualmin.com', 'cloud.virtualmin.com', 'cloudmin.com', 'cloudmin.org', 'cloudmin.virtualmin.com', 'latest-scr...tualmin.com', 'scripts.virtualmin.com', and 'software.virtualmin.com'. The 'virtualmin.com' entry is highlighted, showing 15 users and 34 aliases. Below the table are buttons for 'Delete Selected', 'Update Selected', 'Disable Selected', and 'Enable Selected'.
